**Subject:** Status Update -Parchment, Michigan PFAS Crisis

I've put together a few high level bullets to highlight current status that of the response that I thought we might circulate to our respective managers. Please review and suggest edits or additions .

- EPA has proposed to meet with representatives from MPART and MDEQ early next week to discuss MDEQ's overall PFAS in public drinking water supply sampling initiative, what the state's plans are for responding to additional incidents of PFAS contamination so that EPA WD and SFD can continue to anticipate our involvement in support of their efforts. MDEQ seems receptive to this meeting;
- MDEQ Drinking Water Division and Kalamazoo City Water Dept. staff continue to evaluate water quality in Parchment system to inform multi-agency decision to lift the drinking water advisory currently in place. Region 5 Water Division and EPA ORD staff are being consulted by MDEQ during this process. Key topics are PFAS concentrations as well lead and copper concentrations ;
- MDEQ continues to sample private residential wells in the area. Results received from over half of the wells sampled to date indicate that there are also exceedances of the 70 ppt health advisory for PFAS in some of those wells. The state agencies are working towards providing residents at the locations them with point-of-use (POU) filters;
- On Friday, August 10, a meeting will occur at the state EOC in Diamondale. The governor's office (MPART), MDEQ, MDHHS, Kalamazoo Public Health and City of Kalamazoo will participate. EPA has been invited to listen in via teleconference. Major agenda topics include:
  - Review and discuss all data relevant to a decision to lift the advisory;
  - What necessary actions will be required for private wells ;
  - Messaging to Parchment residents on next steps ;
- The former Crown Vantage paper mill facility continues to be a point of focus for MDEQ's source investigation work.
